AMENDMENTS TO THE CLAIMS:

Please amend the claims as follows, substituting any amended claim(s) for the corresponding

pending claim(s):

1. (Currently Amended) A merchandising system comprising:

at least one tray including one or more mounting supports for mounting the tray on a support

within a vending machine,

the tray having a periphery defined by an inner edge proximal to the support when mounted,

an outer edge distal from the support when mounted, and two radial edges extending between the

inner edge and the outer edge.

the tray adapted to be divided into a plurality of tray zones by one or more tray subdividers

that may be selectively mounted in any of two or more predetermined positions, at least one of the

predetermined positions being radially askew from an the inner edge to an the outer edge of the at

least one tray,

wherein the tray includes at least one of a slot or a guide selectively receiving a tray

subdivider separating one tray zone from another.

U.S. SERIAL No. 10/685,994

PATENT

2. (Previously Presented) The merchandising system according to claim 1, wherein the tray

includes a plurality of slots, a plurality of guides, or both selectively receiving a plurality of tray

subdividers separating at least three zones on the tray.

3. (Previously Presented) The merchandising system according to claim 1, wherein the tray

zones are one or more of unequal sizes and defined by at least one radially askew tray dividers.

4. (Previously Presented) The merchandising system according to claim 1, further comprising:

a center support member on which the at least one tray is mounted; and

a vend door disposed proximate to an outer edge of the at least one tray, wherein the vend

door is selectively movable between a closed position and an open position, wherein the vend door,

when in the open position, permits access to only one tray zone.

5. (Previously Presented) A merchandising system comprising:

a center support member;

a plurality of trays each including one or more mounting supports for mounting the tray on

a support within a vending machine, the plurality of trays mounted on the center support member,

wherein five trays are mounted at each level of nine levels spaced approximately five inches apart;

and

a vend door disposed at each level proximate to an outer edge of one of the trays at that level,

wherein the vend door is selectively movable between a closed position and an open position,

wherein each tray may be divided into up to five tray zones,

wherein the vend door, when in the open position, permits access to only one tray zone of

the one tray, and

wherein the center support member may be selectively rotated to position any selected tray

zone on any of the plurality trays proximate to the vend door so that the selected tray zone is

accessible when the vend door is in the open position.

6. (Previously Presented) The merchandising system according to claim 5, wherein a distance

between the open and closed positions for the vend door is defined by at least one tray subdividers.

7. (Previously Presented) A merchandising system comprising:

at least one tray including one or more mounting supports for mounting the tray on a support within a vending machine, the tray adapted to be divided into a plurality of tray zones by one or more tray subdividers, wherein the tray includes at least one of a slot or a guide selectively receiving a tray subdivider separating one tray zone from another;

a center support member on which the at least one tray is mounted;

a vend door disposed proximate to an outer edge of the at least one tray, wherein the vend door is selectively movable between a closed position and an open position, wherein the vend door, when in the open position, permits access to only one tray zone; and

a catch on the tray subdivider controlling a distance that the vend door moves between the open and closed positions based upon a size of a tray zone positioned proximate to an edge of the vend door.

8. (Previously Presented) The merchandising system according to claim 4, further comprising: an enclosure having an opening within at least a sidewall, wherein the vend door is positioned over a portion of the opening when in the closed position;

a motor for rotating the center support member; and

controls that, when actuated, rotate the center support member to position a selected tray zone proximate to the vend door.

9. (Previously Presented) The merchandising system according to claim 8, further comprising:

a plurality of trays, including the at least one tray, each mounted on the center support

member at one of a plurality of different levels, each tray adapted to be divided into a plurality of tray

zones and including at least one of a slot or a guide selectively receiving a tray subdivider separating

one tray zone from another; and

a plurality of vend doors, including the vend door, each associated with a different level and

each separately selectively movable between an open position and a closed position, wherein each

vend door, when in the open position, permits access to only one tray zone on a corresponding tray.

10. (Currently Amended) A method of operating a merchandising system comprising:

providing at least one tray including one or more mounting supports for mounting the tray

on a support within a vending machine, the at least one tray adapted for division into a plurality of

tray zones, the tray having a periphery defined by an inner edge proximal to the support when

mounted, an outer edge distal from the support when mounted, and two radial edges extending

between the inner edge and the outer edge; and

separating one tray zone from another with a radially askew tray subdivider extending from

the inner edge to the outer edge of the tray and selectively received by at least one of a slot or a guide

on the tray.

Page 7 of 16

11. (Original) The method according to claim 10, further comprising:
separating at least three zones on the tray with a plurality of tray subdividers selectively

received by a plurality of slots, a plurality of guides, or both on the tray.

- 12. (Previously Presented) The method according to claim 10, further comprising:
 separating the tray into tray zones of unequal sizes using a radial or radially askew tray subdivider.
- 13. (Original) The method according to claim 10, further comprising:mounting the at least one tray on a center support member; andselectively moving a vend door disposed proximate to an outer edge of the at least one tray

between a closed position and an open position, wherein the vend door, when in the open position, permits access to only one tray zone.

14. (Previously Presented) The method according to claim 13, further comprising: mounting a plurality of trays, including the at least one tray, on the center support member, wherein five trays are mounted at each level of nine levels spaced approximately five inches apart;

selectively rotating the center support member to position any selected tray zone on any of the plurality trays proximate to the vend door so that the selected tray zone is accessible when the vend door is in the open position; and

associating prices individually with each tray zone on each tray at each level.

15. (Original) The method according to claim 13, further comprising:

moving the vend door a first distance between the open and closed positions when a first tray

zone is positioned proximate to the vend door; and

moving a second distance between the open and closed positions when a second tray zone is positioned proximate to the vend door.

16. (Previously Presented) The method according to claim 13, further comprising:

controlling a distance that the vend door moves between the open and closed positions based

upon a tray subdivider defining a tray zone positioned proximate to an edge of the vend door.

PATENT

17. (Currently Amended) A merchandising system comprising:

an enclosure around at least a portion of a drum perimeter;

a center support member within the enclosure;

at least one tray mounted on the center support member at each of a plurality of different

levels[[;]], each tray having a periphery defined by an inner edge proximal to the center support

member, an outer edge distal from the center support member, and two radial edges extending

between the inner edge and the outer edge, each tray adapted to be divided into a plurality of tray

zones;

at least one radially askew tray subdivider extending from the inner edge to the outer edge

of the tray and received by at least one of a slot or a guide on at least one of the trays, the tray

subdivider separating one tray zone on the at least one of the trays from another; and

a vend door disposed proximate to an opening through the enclosure at each of the different

levels, each vend door corresponding to the at least one of the trays having a tray subdivider

selectively movable between an open position and a closed position,

wherein the vend door, when in an open position, and the tray subdivider permit access to

only one tray zone on a corresponding tray.

18. (Previously Presented) The merchandising system according to claim 17, wherein the tray

zones are of unequal sizes.

PATENT

- 19. (Previously Presented) The merchandising system according to claim 17, wherein a distance that the vend door moves between the open and closed positions depends on a position of the tray subdivider relative to an edge of the tray.
- 20. (Previously Presented) The merchandising system according to claim 17, wherein at least one of the trays has a plurality of tray subdividers separating at least three tray zones on the tray.
